

Learning Management System

The Train-Ease Learning Management System (LMS) is a software package that enables the management and delivery of Web-based and Instructor-led training within an organization. By replacing the difficulties of sectioned learning programs with a methodical way of assessing and raising proficiency and performance levels throughout the organization, you can save time and increase learner productivity. As continuing education and training become more essential to the success of your organization's future, your challenges will be greatly reduced by the use of online training.

Our LMS can be installed on internal networks or reside on the internet to allow learners to efficiently access the learning materials and administration anytime, anyplace, and at any pace. By utilizing the internet or an internal network, training is guaranteed to be uniform and secure for each and every user and administrator. Train-Ease also offers customization of the Learning Management System using our experienced developers and design specialists, so that you may tailor the system to fit your company's needs.

Features:

- **Web-based Course Launching and Tracking**
- **Instructor-led Registration**
- **Student Training History**
- **Email Notifications**
- **Custom Reporting**
- **User-friendly Administration**
- **Evaluation and Assessment Engine**
- **Certificate Management**

LMS System Requirements:

- Processor: Pentium class
- RAM: 32MB (64 or higher recommended)
- Video: 16 bit color with 800x600 resolution
- Hard Drive: 40MB free space
- CD-ROM: required for installation
- Sound: (recommended for running multimedia training)
- MSSQL Server

Train-Ease Learning Management System (LMS) Overview:

- Operates on Windows 95/98/NT4/200/XP/Vista
- Secure login with optional password protection
- Allows setup of user-defined filters for organizing and sorting data
- Produces a variety of reports to satisfy training information requirements for OSHA, ISO, JCAHO, and other licensing and accrediting organizations
- Allows for Employee Tracking, Training Scheduling, Training Tracking, Training Registration and Reporting
- Multi-level security based on login recognition
